## Easy Grow Guide

### Growing On to Finish: Packs, 10cm pots

<b>Media:</b>	Use a well-drained, disease free, peat-based growing mix with pH 5.5-5.8, EC <1.5mmhos.
<b>Temperatures:</b>	Keep media temperature at 15-18°C until roots have developed and then lower to 12-15°C to grow on. Growing cool produces a much better finished product, but the crop time will increase if the temperature is below 12-15°C
<b>Light:</b>	Keep light levels at 3000-4000 fc. Provide shade if light levels are higher to keep temperatures down.
<b>Irrigation:</b>	Practice a good wet/dry moisture cycle to aid root development and control height.
<b>Fertilizer:</b>	Fertilize once a week with 150ppm N (nitrate form) from 15-5-15, 17-5-17, or 13-2-13 but keep media pH at 5.5-5.8 definitely <6.5 and media EC no higher than 1.0-1.5mmhos.
<b>Growth Regulators:</b>	Autumn sowings for spring flowering should need minimal PGR's if the ideal temperatures stated above can be achieved, along with good moisture management. Summer sowings for autumn flowering are much more likely to need chemical PGR's. Sprays of B-Nine (2500- 5000 ppm), B-Nine (1500-2500 ppm) + Cycocel (750-1500 ppm) will give some control.
<b>Pests:</b>	Aphids, Thrips, Spider Mites.
<b>Diseases:</b>	Pythium, Thielaviopsis, Botrytis, Rammularia, Downy and Powdery mildew.

TRANSPLANT TO FINISH:			
Container	Plants/Container	Transplant to Finish	Transplant to Finish
Packs	1x plug per cell	3-4 weeks - Autumn	6-8 weeks - Spring
10cm Pot	1x plug	3-5 weeks - Autumn	7-9 weeks - Spring

**Please Note:** Crop times are based on optimum conditions. Alternative environmental conditions and cultural regimes can alter the crop times stated above. Please refer to the current label recommendations in regard of chemical application.
